

# CIP SYSTEM ANSWERS

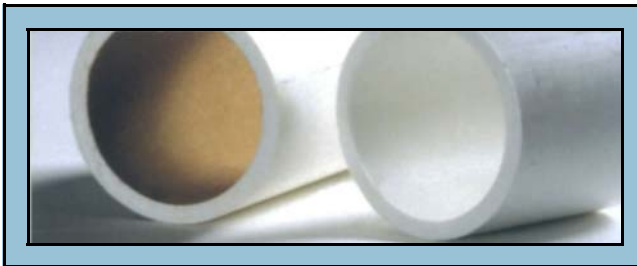

EARTH SAFE OZONE

A good Clean in Place (CIP) system is a valuable asset to any company in the food processing industry and many others. With the addition of ozone to your current CIP system, you can achieve a greater efficiency and higher level of safety. Ozone is the best commercially available oxidizer on the market today. It is 30 times more powerful than chlorine and 3100 times faster acting.

By adding ozone instead of detergents and soaps to a CIP system, not only does it increase the effectiveness of the system, but it also leaves no chemical residues to taint the product lines after cleaning.

Because ozone is generated on-site, there are no special handling precautions or procedures that need to be in place to receive chemical deliveries. Ozone also offers a significant long-term savings over chemical additives. Ozone is one of the best disinfectants of biological contaminants.

Automatic operation makes ESO ozone systems one of the best systems on the market. ESO is able to provide a sys-

A company can throw our way. From small independent systems to large plant encompassing systems, ESO has the expertise and experience to provide a solution for your needs.

Ozone has been used for over 100 years to provide clean drinking water to billions of people throughout the world. Industry usage of ozone has exploded in the past few decades. Food processing, water treatment, medical applications, swimming pool treatment, agricultural, sterilization, decontamination, and many other applications are currently in use throughout the world.

Ozone is one of the safest if not the safest disinfection treatment available for use today. If you would like to know more about how ozone can help your processing facility produce higher quality products with less chance of food contamination, then contact Earth Safe Ozone today. ESO can provide

you with a no cost consultation and can provide on site demonstrations to prove the value of ozone to you. For first hand experience, let ESO show you the benefits.

*Ozone is an approved food additive. The FDA has granted ozone "GRAS" status and approved its use in eliminating contaminants from food and food processing systems.*

## ESO CIP SYSTEMS OFFER MANY BENEFITS

- Reduced chemical use
- No chemical residual
- Faster contaminant control
- No harsh residual build up
- Automatic operation
- Efficient ozone injection process
- Low power consumption
- High output corona discharge system
- Easy to install complete package
- Environmentally friendly biocide
